SUMMARY

Motivated and detail-oriented Junior Software Developer with a strong foundation in software engineering principles and hands-on experience in building reliable, efficient applications. Driven by curiosity and a passion for problem-solving, I thrive in dynamic environments where I can learn quickly and contribute meaningfully. My proactive approach to identifying and resolving technical challenges ensures the delivery of high-quality solutions. With a commitment to continuous growth and adaptability, I am eager to bring my technical expertise, collaborative mindset, and enthusiasm for innovation to a forward-thinking organization.

EDUCATION

Advanced Diploma in Software Engineering (Ongoing)

09/2024 – 09/2026

Aptech Computer Education 

Lagos, Nigeria

SKILLS

Web Development

- **Languages:** Java, Python, JavaScript, C#, HTML, CSS, MYSQL, SSMS, M
- **Frameworks:** SpringBoot Flask, React, Node.js, Bootstrap CSS, Tailwind CSS,
- **Tools:** GitHub, REST APIs, deployment basics

AI / Machine Learning Skills

Currently developing skills in:

- Machine learning with Python
- Model development using Scikit-learn, TensorFlow
- Data analysis and visualization

PROJECTS

HomFlow

12/2025 – Present

Stacks - (Flask - Python, SQLITE)

HomFlow is a smart home platform enabling seamless automation, control, and monitoring of connected devices.

- Integration for different smart tv brands
- Embedded security for IP concealing

JavaJolt

04/2026 – 05/2026

Stacks - (SpringBoot - Java, MySql, Docker)

Quiz application for students and pros based off of knowledge on java topics

- Designed and implemented a Spring Boot-based quiz platform with secure authentication and OTP verification.
- Integrated Brevo API for transactional email delivery, including dynamic HTML templates and logo hosting.
- Built user registration, login, password reset, and account verification flows with session-based OTP handling.
- Deployed on Render with Clever Cloud MySQL, ensuring scalable database management and cloud-ready architecture.

WeVote - Online Voting System

03/2026 – 05/2026

Stacks - (Java, Mysql, Docker)

WeVote is a secure online voting system designed to streamline voter registration, authentication, and ballot management, promoting free and fair elections.

- Implemented secure authentication and session-driven verification flows to support user participation before elections.
- Integrated personalized notifications and email reminders to keep users informed of upcoming deadlines and election events.

- Deployed with a scalable cloud database architecture, ensuring reliability and readiness for large-scale public use.

BidSpeed 

Stacks - (React js, Express js for backend support, JSON Schema)

A fast, intuitive auctioning app that streamlines bidding, boosts engagement, and simplifies winning deals.

09/2025 – 09/2025
